

### StreetEagle® LiveRoute

View actual (vs. planned) route performance in real time – on the road or in the office

For businesses that depend on fixed route tracking, evaluating performance of daily work versus plan requires data that is both accurate AND timely. For many years, evaluating route performance has depended on analyzing performance after-the-fact. That can help improve future performance, but it won't help address mistakes, delays and unexpected problems *as they happen* – which can lead to lost revenue and poor customer satisfaction.

"All 46 routes are looking great right now except #419 (Normandy Farms), running 17 minutes behind. Better check on them."

SE LiveRoute fixed route tracking software eliminates that problem by delivering route performance data directly *in real time*, so that you can make the

adjustments that will maintain the highest level of service, and maximize your available resources. You'll know exactly what routes have been completed and when, and can communicate accurate status to both mobile workers and their managers alike.

### View progress of all routes in real time to:

- Provide accurate visibility into vehicle/driver performance against plan
- Eliminate clumsy multi-screen navigation to get the information you need quickly
- Respond immediately to problems, improving customer service
- **Seize** valuable opportunities to coach drivers in real time
- Reduce current operating costs and improve driver performance with smarter planning and more timely response to issues

Whether your business involves waste collection, snow removal, delivery or anything else involving fixed routes, LiveRoute gives you the instant intelligence you need to make smarter, cost-saving decisions as things happen (not after the fact). SE LiveRoute fixed route tracking empowers you to be *proactive*, not reactive – and deliver the highest quality service to your customers.

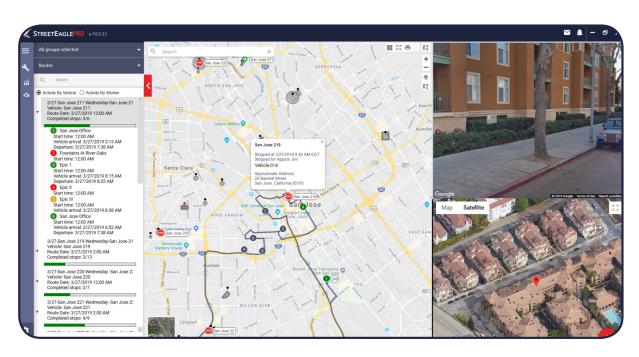

(Back side of sheet: what specific features make LiveRoute fixed route tracking more powerful than standard telematics and routing/scheduling systems?)

# StreetEagle® LIVEROUTE Fixed Route Tracking Software

#### LiveRoute's unique features to make your operation more productive:

- Real-time route status indicated on map/control panel On the map, the stop symbols (numbered) and segments
  between each stop on the route are color coded to indicate their status. The visual indication of progress and route
  completion makes it easy for dispatchers to catch missed stops, and react accordingly.
- Route status grid shows every route, right now Dispatchers can check on the status and completion of every route in one
  convenient view, informed by real-time data. Extremely handy for dispatchers or supervisors who want to capture a real-time
  view of all of the route activity currently happening in the field.
- Extensive suite of route history reports (filtered by vehicle, worker, job status) Determine your timeframe, view all
  routes scheduled for that period, and LiveRoute fixed route tracking software will show you the completion percentage of
  each route with a count of stops completed/missed.
- Route overlays for immediate visual confirmation StreetEagle automatically generates overlays for your live routes on the map, no matter what size. For dispatchers and supervisors who manage and assign routes on a daily basis, this feature is an enormous time saver and improves efficiency exponentially.

Within StreetEagle, users can see live routes for the day, displayed with a listing of each assigned stop on the route. These stops/jobs show the job information, current completion status, arrival/departure times (if completed), and duration of stop (if completed).

## And finally... what about integration?

StreetEagle already integrates with several popular route planning software solutions available today, and we can easily import your scheduled routes into the system. However, even if we don't currently integrate with your routing system, we will – at no additional cost to you. Unlike many other solutions on the market, we have never charged extra for integration, because multiple software systems are a fact of life for our customers – and our job is to get you working more efficiently faster, not slow you down.
