

## StreetEagle® + Sygic® Professional Navigation

Combine the most comprehensive mobile workforce management toolset available, with truck routes trusted by over 1,500 fleets/500,000 drivers worldwide

Many fleet management solutions leave motor carriers high and dry when it comes to providing specialized trucking routes. Fortunately, InSight Mobile Data partners with Sygic Professional Navigation to integrate accurate 3D GPS navigation and routing, designed specifically for commercial trucks, directly into the StreetEagle software platform.

The result is an easily customizable, highly efficient routing solution that offers beautifully rendered 3D maps, accurate text-to-speech capability, precise ETA's, and automatic re-routing – without requiring those last minute “workarounds” that cause frustrating, and costly, delays in the day’s work schedule.

*Accurate 3D rendering, detailed truck paths and real-time traffic are among the reasons hundreds of thousands of drivers worldwide rely on Sygic.*

### What does Sygic Truck Navigation deliver?

Sygic's Truck Navigation services are being used by 1,500+ fleets in over 110 countries around the world. Maps are downloaded and accessed offline to save on data charges – a connection is not required. The features of Sygic navigation include:

- High quality, up to date maps stored on your device (3D and 2D views)
- Routing profiles for different vehicles (height/weight/length/axle profile)
- Detailed truck paths for large vehicles with specific restrictions
- Turn-by-turn voice instructions
- Accurate text-to-speech capabilities
- Real-time traffic information and speed camera database
- Automatic re-routing
- Truck-specific POIs: stops, parking, gas, weigh stations and more

**StreetEagle integrated with Sygic truck navigation ensures that your trucks operate at peak efficiency – without unnecessary risks, delays or costs.**
