

Fleet Management and Safety for Solid Waste Operations

Providing the tools and intelligence for today's waste industry

InSight knows that busy waste operations need sophisticated and affordable technology tools to **KNOW**, **MANAGE** and **SEE** more in real-time than just vehicle location and status. So we've designed a complete fleet management solution for the waste industry that ties many of their most important tasks together in a single, integrated and supported platform (StreetEagle® Professional software). From cameras that capture video both inside and outside the vehicle, to real-time route progress with alerts for route/service deviation, to dynamic dispatch and scheduling of work orders and routes – InSight will help you run a much smoother, safer operation.

3 Levels to Smarter and More Profitable Solid Waste Operations:

1. **KNOW** it all

Accurate, real-time vehicle location and activity data to help you make minute-by-minute decisions to manage the moving parts of your operation.

2. **MANAGE** it all

Mobility tools to help you send and receive job info from the field, track driver status and performance, and make adjustments in real time.

3. **SEE** it all

Total visibility (live and historical video) into vehicle and equipment usage to improve safety, measure performance and provide liability protection.

KNOW: Instant access to vehicle location/activity in real time

StreetEagle Pro Telematics Software

For over 20 years, StreetEagle Pro has enabled busy waste operations to manage all of their moving parts and shifting priorities in the field. It's a single, proven telematics platform (available on desktop or mobile) that delivers:

- Accurate, comprehensive, and actionable information about your fleet and mobile workers automatically as it happens
- Maps, reports, alerts, dashboards, historical replays and live video to display your data in whatever way makes sense for your team
- The capability to view, download and send information to anyone on your team, accessible from one platform
- A highly developed set of software tools to measure, analyze and report on worker efficiency, driver behavior, asset performance and safety

MANAGE: Mobile tools to improve efficiency in the field

StreetEagle Mobile, Utility, LiveRoute® and Weight Monitoring

InSight also provides a whole suite of mobile apps and tools specifically designed to monitor and measure the efficiency of your waste operations in real time. From sending accurate job information, to monitoring driver behavior, to tracking route progress and load weight per stop – StreetEagle gives you up-to-the-minute intelligence to measure and improve your service in the field.

- **StreetEagle Mobile** – Mobilize your business by finding vehicles instantly, receiving and setting customized alerts, running vehicle histories, and/or viewing individual driver performance scores and video clips of driving events.
- **StreetEagle Utility** – Supervisors and managers use Utility to communicate, update, log and validate critical tasks and job status as they occur. Your team can send/receive critical job information, clock in and out from wherever, scan and track assets/equipment, and access necessary forms digitally – all from one easy to use interface.
- **LiveRoute** – LiveRoute allows you to make important decisions on active routes in real-time, with automatically generated statistics of stops completed, stops remaining, missed stops and overall performance measured against the route plan, backed up with map overlays and replays.
- **Weight Monitoring** – Utilizing on-board scales provided by Air-Weigh®, the waste industry's leading producer of weight monitoring technology, InSight delivers precise bin weight data that ties directly to truck location and activity via the StreetEagle telematics platform.

SEE: Total visibility into vehicle and equipment usage

StreetEagle LiveCam® Camera Systems

StreetEagle LiveCam reinforces InSight's commitment to help waste organizations to build a culture of safety by providing their drivers with tools that protect and empower them. LiveCam camera systems offer multiple on-board camera configurations, mounted on dashboards or other strategic locations on the vehicle, to provide multiple angles for vehicle protection. Fleet managers can access a live feed or historical video (and optional audio) clips of any driver in action, which can be used for driver coaching, insurance claims, legal disputes and much more.

LiveCam helps you protect your drivers, and your reputation, by delivering:

- Accurate, real-time insight into your drivers' behavior and adherence to safety practices
- Access to historical video footage to analyze past events
- Integration with StreetEagle to view relevant video clips from multiple points in the software (reports, alerts, maps)
- Opportunities to coach drivers using actual video footage (proven to improve driving performance)
- Reductions in company accidents, insurance premiums, and repair costs to boost your bottom line
- Protection for drivers, and the entire company, from insurance risk and false accident claims

StreetEagle LiveCam provides live video, as well as links to watch clips associated with historical events directly from the map, email alerts and reports.

- 1 Road-facing
- 2 Driver-facing
- 3 Side cameras
- 4 Rear view

Multiple Cameras – Inside and Out

For waste trucks especially, a camera solution that covers multiple angles is essential for safety, liability protection and incident evaluation and review.

LiveCam's multi-camera configuration includes a dash-mounted, dual-facing driver cam (records both inside and outside the vehicle) and a high-capacity DVR. It also provides the ability to connect to multiple auxiliary cameras, such as side view, rear-view, and backup cams with in-cab video monitor. Video feeds from these cameras can be displayed together (as seen above), archived, and accessed from anywhere at any time using StreetEagle's mobile apps. From front to back, top to bottom, you're protected.

Value-Added Services: Fleet Safety and Integration

Building a Culture of Safety

InSight has developed an array of tools to help waste organizations KNOW, MANAGE and SEE the way their drivers perform on the road, improve safety practices and reduce costs associated with accidents and high insurance premiums. The goal is to encourage healthy competition, coach employees who need improvement, reward superior performance and create a culture that equates success with safety.

The StreetEagle platform comes with various safety features that provide additional value and protection to your organization:

- **myScore® Driver Safety Solution** – myScore is a set of interactive tools that deliver precise fleet driver safety data directly to employees and supervisors – allowing them to compare individual performance to other team members, or to an entire fleet.
- **Driver Behavior Monitoring** – StreetEagle delivers a complete set of monitoring features that measure driving practices that put your vehicles and team at risk. Drivers hear audible alerts in their cabs when violations occur; managers receive real-time alerts and can analyze extensive reports to gain insight into company compliance and performance.
- **KPI Dashboard** – StreetEagle's KPI Dashboard visualizes important driving safety metrics such as acceleration, hard braking and sharp cornering. It also shows vehicle speeds versus posted speed limits make sure drivers aren't risking accidents on residential and secondary roads.
- **Fleet Risk Reporting** – The unique Fleet Risk Report collects driver behavior data and compiles it in one easy-to-use report to help managers identify drivers most likely to be in an accident. This "predictive risk" analysis allows preventative coaching to take place *before* your drivers are in an "at-fault" collision – not after.

Integration

InSight doesn't run from integration – we embrace it, and we never charge extra for it, because we know it will make your organization run smarter. We work with our customers along with waste industry hardware and software vendors – from back-end routing and scheduling software, to vehicle-specific hardware like sensors for weight and PTO activity. If there's a software system you'd like our data to interface with, our development team will provide the experience and resources needed to get the project done, as we've been doing for over 20 years.
