Real-time visibility into the mobile work environment

## StreetEagle LiveCam® and Digital Ally Cameras

Two experts in fleet safety join forces to provide exceptional value to mobile operations of all kinds

As an extension to the StreetEagle line of easy-install, integrated video capture solutions, the DVM-250 from Digital Ally is a powerful integrated camera option that won't obscure drivers' views, but will provide all the protection and security fleets need for their vehicles and employees.

The DVM-250 captures both road- and driver-facing video so that you never miss an important driving event. It also comes with an optional array of supplemental cameras, to capture side, rear and interior views of your vehicle, depending on the needs and safety requirements of your business.

### Digital Ally DVM-250, integrated with StreetEagle, is an ideal choice for:

- Fleets looking for an unobtrusive, easy-to-install camera with the option to add supplemental views (side, backup and passenger views)
- EMS and public safety operations that need to monitor interior and exterior of ambulances
- Operations looking for video capture fully integrated with telematics, alerts, reports, and mobile (smartphone or tablet) access
- Businesses who want to record and coach their drivers retroactively, and would prefer to save a little money by transmitting video over WiFi (vs cellular data charges)

### Let StreetEagle and Digital Ally help you build a "safety first" culture

StreetEagle fleet management software and Digital Ally cameras are a winning combination of solutions, now integrated to provide exceptional value to mobile operations of all kinds. StreetEagle's onboard monitoring and driver safety solutions interface directly to Digital Ally cameras, allowing users to visualize driving events and exceptions like never before.
